Dear Recruiting Manager,

I was excited to see your listing I found on Indeed for the Software and Data Engineering Internships for the summer. I aspire to work with Urbancoolab as I am excited to employ the latest technologies to advance machine creativity in an agile development environment. I am the ideal candidate because my experiences in multiple areas—web-based applications, front-end, database management, analytics, project management—manifest my adaptability to new tools. With an eagerness to develop new skills, challenge-driven nature, and proactiveness in team environments, I guarantee my presence as Software or Data Engineer Intern will be a beneficial addition to your network.

This year, I had the chance to redesign information management to improve data integrity for reBOOT Canada—a non-profit organization that refurbishes hardware—alongside an engineering design team. I created a database in PostgreSQL and employed scripting in Django (Python framework) for performing analytics on inventory status. The process of dynamically learning an unfamiliar framework and utilizing PostgreSQL for the first time demonstrates my adaptive behaviour. Furthermore, educating my team members on database theory and guiding them through version control with Git has taught me how to leverage my capabilities to others and communicate effectively.

I appreciate you taking the time to read my résumé. I may be contacted by email or by cell at 647-389-7174. I look forward to hearing from you and making an enduring impact for Urbancoolab.

Yours truly,

Shaziah Gafur
